A Strategy for Library Management - UC Berkeley Library This book provides library managers with quantitative, qualitative, and descriptive models for decision-making, management, and planning. It consists of three models for library management, decision-making, and planning. The book covers topics such as data processing, forecasting, planning control, decision-making, and planning. It offers mechanistic formulas for library administrators to use in decision-making, management, and planning. The book is available in English and is published by Academic Press in San Diego. It provides a comprehensive guide for library administrators and managers, offering practical strategies and models for achieving excellence. The book is a valuable resource for library managers looking to develop effective strategies and systems for their organizations. The book is also available in digital format and includes a CD-ROM with additional resources. Overall, the book is an excellent resource for library managers looking to improve their decision-making, management, and planning processes.
