WHO Manual For The Standardized Investigation And Diagnosis Of The Infertile Couple

Patrick J. Rowe World Health Organization

The treatment of male infertility has been revolutionised by advances in the understanding of the causes of infertility. With a knowledge of the aetiology and epidemiology of infertility, in the correct setting and using the correct diagnostic tests, diagnosis can be accurate. This information is the foundation of the treatment of infertility.

The prevalence of infertile couples differs among women over the world. The aim of this approach is to unify and standardize both the investigation and diagnosis of male infertility and the causes of infertility. 

Evaluation of infertility 3A.2.2 Recommendations for the diagnostic evaluation of male infertility. 8. “Infertility is the inability of a sexually active, non-contracepting couple to achieve. Diagnosis and evaluation of male subfertility according to the WHO Manual for the standardised investigation, diagnosis and management of the infertile male is a complex process. It starts with a medical and reproductive history taking, followed by a physical examination, semen analysis, and a thorough diagnostic evaluation. The purpose of this manual is to guide the medical professional in the diagnosis and treatment of infertility. The Prevalence and Causes of Primary Infertility in Iran: A. This standardized approach to the assessment of infertility will lead to more efficient, systematic and economic care for the infertile couple. The diagnostic approach is based on Clinical aspects of infertility and the role of health care, infertility diagnosis, epidemiological survey, and sperm analysis. Distribution of causes of infertility is important in populations. The WHO Manual for the Standardized Investigation and Diagnosis of the Infertile Couple: Cambridge, 1993.
